

User manual

Our database “M- investments” holds data for movies, for possible investors who want to decide in which movie to invest next. Our application gives services about the data it holds for choosing the most profitable, valuable, or moral investments.

Different investors might have different considerations for investing. For example, some may choose movies where the most profitable actor of the genre is, while some might make their decisions regarding to moral values, such as feminism. In this project, we aspire to help those investors make their decision.

A possible way our application could look is as follows:

By selecting one of the buttons, the user gives desired inputs, and get the outputs of the queries designed in our database.
